

Maxim Plămădeală

Senior AI & Software Engineer

maxpmp35@gmail.com • (+373) 675 90 390 • [LinkedIn](#) • Chisinau, Moldova

Senior backend and distributed systems engineer with 3.5+ years owning production microservices, data infrastructure, SaaS integrations, and AI-adjacent workflows in Go and Python.

- Own 35+ enterprise integrations for 100+ customers.
- Resolved 150+ production incidents in 6 months.
- Reduced Kafka lag by 78%, infra costs by 34%, MTTR by 35%.
- Improved high-volume Snowflake data extraction reliability by 60% and query success by 45%.

I take end-to-end ownership: architecture, delivery, reliability, incidents, and customer impact.

Experience

Reco, Leader in Dynamic SaaS Security; first unified AI Agent Security for SaaS

Chisinau, Remote

Senior Go Developer & Researcher

Oct. 2025 – now

Summary: Built production distributed services powering AI-adjacent workflows and SaaS integrations for 100+ customers.

- **Own 35+ SaaS integrations**, including Snowflake, SAP, Slack, etc., across distributed microservices environments.
- Resolved **150+ production incidents in 6 months** by improving observability, retry logic, structured logging, and reliability workflows; **reduced MTTR by 35%**.
- Improved high-volume data extraction with S3-hosted chunked results and dual-format parsing; reduced **recurring Snowflake data extraction failures by 60%** and increased large-query success by 45%.
- Delivered a production-ready enterprise integration **in under 6 hours** for urgent customer onboarding requirements.
- **Redesigned authentication flows** for selected integrations by implementing internal SAML assertion generation, simplifying onboarding, and reducing dependency on external systems.
- Improved AI governance and model traceability for 100+ customers by building observability workflows that track customer-level model usage, ETL execution, AI workflow metadata, and operational health across production systems.
- **Scaled LLM-backed security workflows using LangChain and Amazon Bedrock** by integrating model execution, prompt orchestration, and backend reliability controls into distributed microservices.

Arrive (former Parkopedia), Smart parking leader: 20,000 cities worldwide

Chisinau, Hybrid

Software Engineer & Computer Vision Researcher

May 2024 – Sept. 2025

Summary: Modernized analytics infrastructure and distributed processing workflows, bridging research-oriented systems into production.

- **Led development of a Go + React analytics platform**, replacing legacy tooling and establishing engineering architecture standards.
- Built a Redis-based distributed caching library, improving service responsiveness and **reducing infrastructure costs by 34%**.
- Architected and built a Kafka-based processing service integrated with Airflow pipelines and designed for AWS ECS deployment, **reducing Kafka lag by 78%** and significantly improving throughput and reliability in high-volume data workflows.
- Worked on redesigning analytics and operational workflows, increasing engineering efficiency by 30% and reducing process errors by 23%.

smartdata, Software development and outsourcing

Chisinau, On site

Golang Developer

Aug. 2023 – Mar. 2024

Summary: Developed distributed backend infrastructure and orchestration systems for microservice-based applications.

- **Re-architected scheduling infrastructure** using Redis sorted sets and recurring orchestration patterns, **improving scheduling efficiency by 40%**.

- Optimized gRPC communication between distributed services, **reducing inter-service latency by 35%**.
- Contributed to backend reliability, service scalability, and distributed workflow optimization across production environments.

Sigmoid, NGO focused on machine learning

Chisinau, Hybrid

Machine Learning Engineer & Volunteer Contributor

May. 2023 – Now

Summary: Contributed to Moldova’s local machine learning community by mentoring junior learners, supporting educational initiatives, and helping build internal tooling for automated assignment evaluation.

- Owned mentorship for 2 padawans by guiding their machine learning learning path, reviewing assignments, giving technical feedback, and supporting their growth from fundamentals to applied ML work.
- **Co-owned development of an internal assignment evaluation platform** designed to parse and assess code submissions, trained models, computer vision outputs, and generative AI prompts as a part of the LMML Hackathon.
- Increased accessibility of ML education for Romanian-speaking learners **by contributing to the translation of a Hugging Face course from English to Romanian**.
- Supported community growth by participating in interviews for new members and helping evaluate technical motivation, learning potential, and cultural fit.
- Contributed on a volunteer basis, combining mentorship, engineering, and educational work to support the local machine learning community.

Certifications

AWS Cloud Practitioner, AWS	Sept. 2024
Convolutional Neural Networks, DeepLearning.AI	Aug. 2024
Probability & Statistics for Machine Learning & Data Science, DeepLearning.AI	Feb. 2024
Advanced Learning Algorithms, DeepLearning.AI	Dec. 2023

Education

BSc in Software Engineering, Technical University of Moldova	Chisinau, 2026
--	----------------

Skills & Languages

Amazon Bedrock, Sagemaker, LangChain, workflow orchestration, ETLs, observability, distributed systems
Go, Python, FastAPI, Flask, React, TypeScript
AWS, Kubernetes, Docker, ECS, Airflow, Argo, Kafka, Redis, PostgreSQL, MongoDB, ClickHouse, Grafana
Scikit-learn, computer vision, data processing, production research systems

English, C1 (fluent)
